

TZO Supplies Dynamic DNS Services for HP MediaSmart Servers

TZOLKIN Corporation

78 Main Street

Pepperell, MA 01463

PEPPERELL, MA. (BUSINESS WIRE) January 30, 2007

TZO – Tzolkin Corporation, an industry provider of Dynamic DNS services, announced it will supply embedded dynamic DNS services for the new HP MediaSmart Server product offering, which is to ship later in 2007. TZO's Dynamic DNS service allows small enterprise, SOHO and residential customers hands-on control over their own Internet presence.

TZO delivers: Dynamic DNS, Email forwarding, Mail relay, port redirection, Web/Email hosting, Automatic Failover and Load Balancing. This intelligent TZO service transparently navigates and manages such issues as: blocked ports, secure protocols and integrated email file attach and delivery requests. This enables in-bound Internet access to a multitude of devices, such as routers, Web Servers, DVRs, IP cameras and more.

"We are very excited with our relationship with HP", said TZO President and CEO Gary Cook. "We've specialized in access and availability of consumer-based server products for many years, and in doing so, have solved many of the underlying issues."

The HP MediaSmart Server helps consumers access their digital assets from any computer or digital entertainment center on the home network.

"TZO allows our customers the ability to select a personal web address for easy and secure remote access to their HP MediaSmart Server," said Maureen Weber, General Manager of the Personal Storage Business division at HP. "We chose TZO for their strong product offering, expertise in Dynamic DNS setup and knowledge in creating a simple, intuitive end-user experience when accessing a MediaSmart Server."
