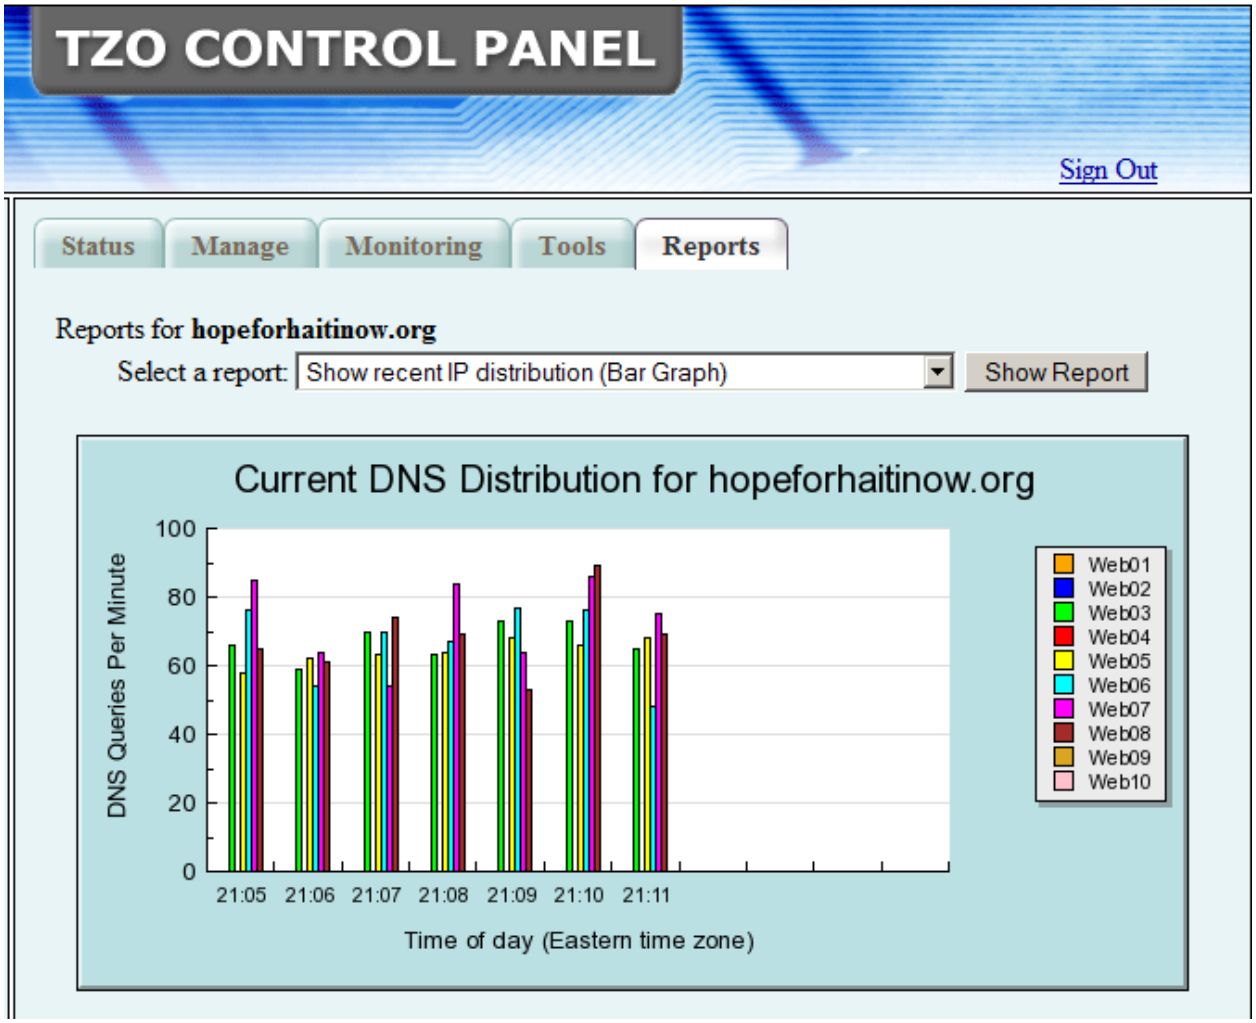
Hope for Haiti Now

During the weekend of January 22 2010, a star studded event was run on national television requesting donations for the devastated earthquake victims of Haiti raising over 35 million dollars.

www.HopeforHaitiNow.org


TZO was responsible for the DNS services for the Web portion of this event, including Load Balancing the web traffic across as many as 10 cash transaction servers. TZO was chosen for their core competencies in reliable DNS services and their well known TZO-HA High Availability services. This is a perfect example of how SaaS, Software as a service is a perfect solution for this type of engagement. This service can be set up in minutes, utilized for the period of the engagement, and when the event is over, the services can be suspended, all without hardware purchase/procurement, configuration, and deployment.
