

## **Tzolkin delivers a low cost solution for high availability with TZO-HA.**

May 11, 2004 01:45 PM Eastern

PEPPERELL, MA. May X, 2004 (BUSINESS WIRE)—Tzolkin Corporation today announces a break through in low cost-high availability for Internet bound web and mail servers. TZO-HA, [www.tzo-ha.com](http://www.tzo-ha.com) is a low cost solution for high availability. “It’s a natural progression, to take the next step and provide a very simple yet powerful overlay to an already commercially proven infrastructure which currently serves 70,000 customers in 70 countries around the world.” Says Christopher Cook , Director of Sales and Marketing for Tzolkin Corporation.

TZO-HA provides high availability for customers that need fault tolerance with their Internet facing web or mail servers. TZO-HA is a service that enables immediate DNS and/or MX record modification to dynamically point the Internet to appropriate backup server/s in the event of a primary circuit or server failure.

“Web server availability is critical to my business.” Says Kevin Lee, CEO of Did-it.com . “TZO-HA is an essential component for Did-it.com. We rely on, TZOlkin’s technology to deliver an unprecedented level of reliability that my business and my customers demand.” “Millions of dollars of Google and Overture paid search clicks flow though our servers, so we need every redundancy possible. Until we found TZO-HA, DNS was a weak point in the chain.”

TZO-HA allows for immediate availability of secondary server/s or clusters in the event of failure. Most IT managers do a fine job at building redundancy in to their back-end hardware infrastructures. However, many over look the value of building redundancy in to the out-bound Internet facing DNS record management. “Adding this level of fault tolerance to Internet side of the equation, truly completes the puzzle of being able to exceed 5-9’s reliability”, says Cook.

TZO-HA takes advantage of Tzolkin’s unique and innovative TZO-mon feature set. This allows TZO-HA to extend to far more demanding networks than it’s predecessor AutoFailover. As well as scaling up, TZO-HA also scales down with TZO-HA for Single Server. This SS version allows SOHO and low end enterprise customers to now take advantage of low cost high availability. TZO-HA for Single Server has an entry price of \$69.00 per month.

About Tzolkin Corporation

Tzolkin Corporation is a privately held company, and a leading commercial provider of dynamic DNS services globally. Tzolkin began delivering “TZO” dynamic DNS services in 1998 and has developed core competencies in a full range of efficient, reliable dynamic DNS services. Tzolkin is known for its world renowned reliable dynamic DNS services, ([www.tzo.com](http://www.tzo.com)), and has 70,000 customers in 73 countries world wide. Tzolkin’s AutoFailover product with high availability, offers a low cost solution to high availability. By deploying autofailover or load balancing services, TZO-HA customers can exceed 5-9's availability for their Internet bound web servers. Tzolkin is located at 78 Main Street Pepperell, MA 01463.
